ROCK TRED
POLYMER COATING SOLUTIONS
Defining Excellence Since 1939

ROCK TRED- SITE VISIT SURVEY SHEET

Contracting Party:								**Sheet**	1	of 2
Contact:										
Address:										
City:					State:		Zip:			
Phone:		Fax:			Cell					
Email:										

SECTION I – Our Testing & Research Analysis includes:

Overview (Room, area, general description):							
Budget constraints:							
Downtime limitations:							
Existing coating thickness:							
Aesthetics desired:		Skid resistance required:					
Performance & service life expectations:							
Key problems that need to be solved:							
Existing Substrate:	Concrete		Steel		CMU		Wood	
	Gypsum Board			Cement Board			Other	
If tile is there a setting bed underneath?							
Describe the existing coating on the substrate and the condition of the substrate if visible (rusty, spalled, pitted, exposed aggregate, etc)							
If concrete or CMU:	How long has the concrete/mortar cured?						
	What curing agents or hardeners have been used?						
Is there a vapor retarder (.3 U.S. perms) or a vapor barrier (.0 U.S. perms) under concrete slab?							
Describe CMU alignment, texture and joints							
Additional notes:							
Coating problems: will be, or have been, caused by:	Traffic		Water		Impact		
	Chemicals		Movement		Slipperiness		
	Cleaning		Vibration		Other		
Hazardous Materials present:		Substrate Contamination:					
Corrosion accelerators in the facility:							
If slippery what is the cause**:**	Grease		Oil		Animal Fat		Water	
	Other						
If chemical then describe all chemicals by their technical name (Obtain MSDS Sheets):							
Collection of MSDS for materials used in cleaning or stored in the facility:							
Cleaning procedures:	Steam		Hot Water		(temp.__ F.)		
	Sweeper		Mop		Chemical		
Traffic classifications:	Heavy		Moderate		Light		
	Foot Truck		Track Steel		Wheel Rubber		
	Wheel Composition		Wheel Width/No. ___/___		Diameter		
Concerns:	special enclosures		confined space		lead		
	asbestos		auxiliary heating		lighting		
	dehumidification		cranes		lifts		
	extra hose lengths		fans		negative draft		
	other equipment needed for project						
Site testing:	Substrate Temp:		Air Temp:		Relative Humidity:		
	Dew Point: PH:		Dew Point:		PH:		

Moisture Readings		Additional Testing Needed:	

How will the installation conditions vary from the test data recorded above?

The Facilities environment, that coatings will be installed and in which the coating system must perform:

Additional notes:

SECTION II - **Our Customer Needs Analysis includes understanding:**

Who else is bidding the project and what have they proposed?

Describe there proposed preparation and system installation:

Project timeline (# days, Shift work, weekend, start and completion date, etc):

Return to service (how soon after installation will area be exposed to operating conditions):

Can room temperature be raised if necessary?	Yes		No		To what Temp?		F	
Will foodstuffs/personnel remain in the plant during installation?			Yes		No			
Describe existing ventilation:								
Can LP gas be used?	Yes		No		Other			
Can gas be used?	Yes		No		Other			
Is 480 3- phase with 60amps available?	Yes		No		Other			
Is 240 1- phase with 100 amps available?	Yes		No		Other			
How many feet from power source to work area?								
Describe loading dock area: (Dock height, ground level, distance from work area, etc)								
Is a current drawing or blueprint provided?	Yes		No		Cost $			
If a seamless cove base is required describe:								
If termination Strips are required describe:								

Describe & measure expansion joints, control joints, cracks and/or repairs needed:

If elevated work what is the highest point that must be reached?	
Describe areas for mix station, product storage, etc:	

DRAWING
